

- Using triphosphor fluorescent powder, advanced water-powder coating technique, which increases efficiency of light and reduces light attenuation.  
Good lighting effect and energy-saving, small color difference, CRI up to above 85., the illuminated objects looks more true and eyes feel more comfortable.
- Warmwhite, coolwhite and daylight which can suitable for different color temperature requirement.
- Additional cathode protection ring at two ends of tube, which prevents the tube from black.  
Advanced water-powder coating technique, which increase efficiency of light and reduces light attenuation.  
Using triplewire filament to ensure sufficient electron powder and prolong service life.

Φ	Current	Voltage	Luminous (lm)	Life Span	Socket
16	0.17A	29V	195/190/180	12000h	G5
16	0.16A	42V	310/300/280	12000h	G5
